THE PROBLEM

Patients know their symptoms. They rarely know the medical term for them.

Vezeeta directory lists **17,119 doctors** across Egypt — searchable by specialty, name, or area. But that search only works if the patient already knows which specialty they need.

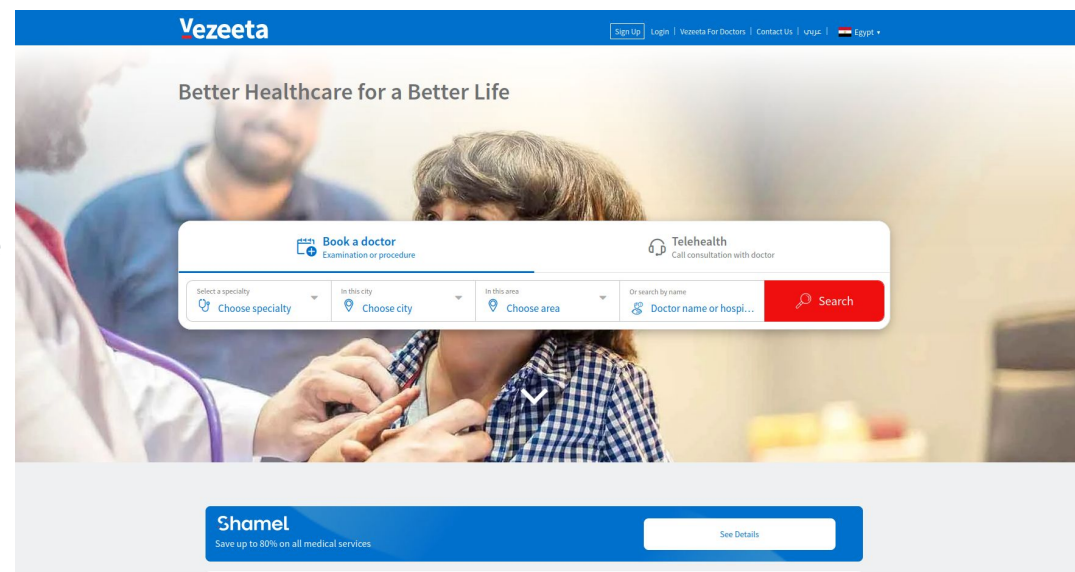

Who this affects

Anyone using the directory in Arabic, English, or Egyptian slang — especially first-time users and older patients who describe pain, not diagnoses.

How often it happens

Every time a patient types a symptom instead of a specialty name — a keyword directory simply has no answer for that query.

<https://www.vezeeta.com/en>

THE IDEA

An agent that **turns everyday symptom descriptions into the right doctor** — for patients who don't speak medical jargon.

What Tabeeby Actually Does

Understands Symptoms

In Arabic, English, or Egyptian slang — no medical terms required.

Searches by Meaning

Semantic search across 17,119 verified doctor profiles, not keywords.

Filters What Matters

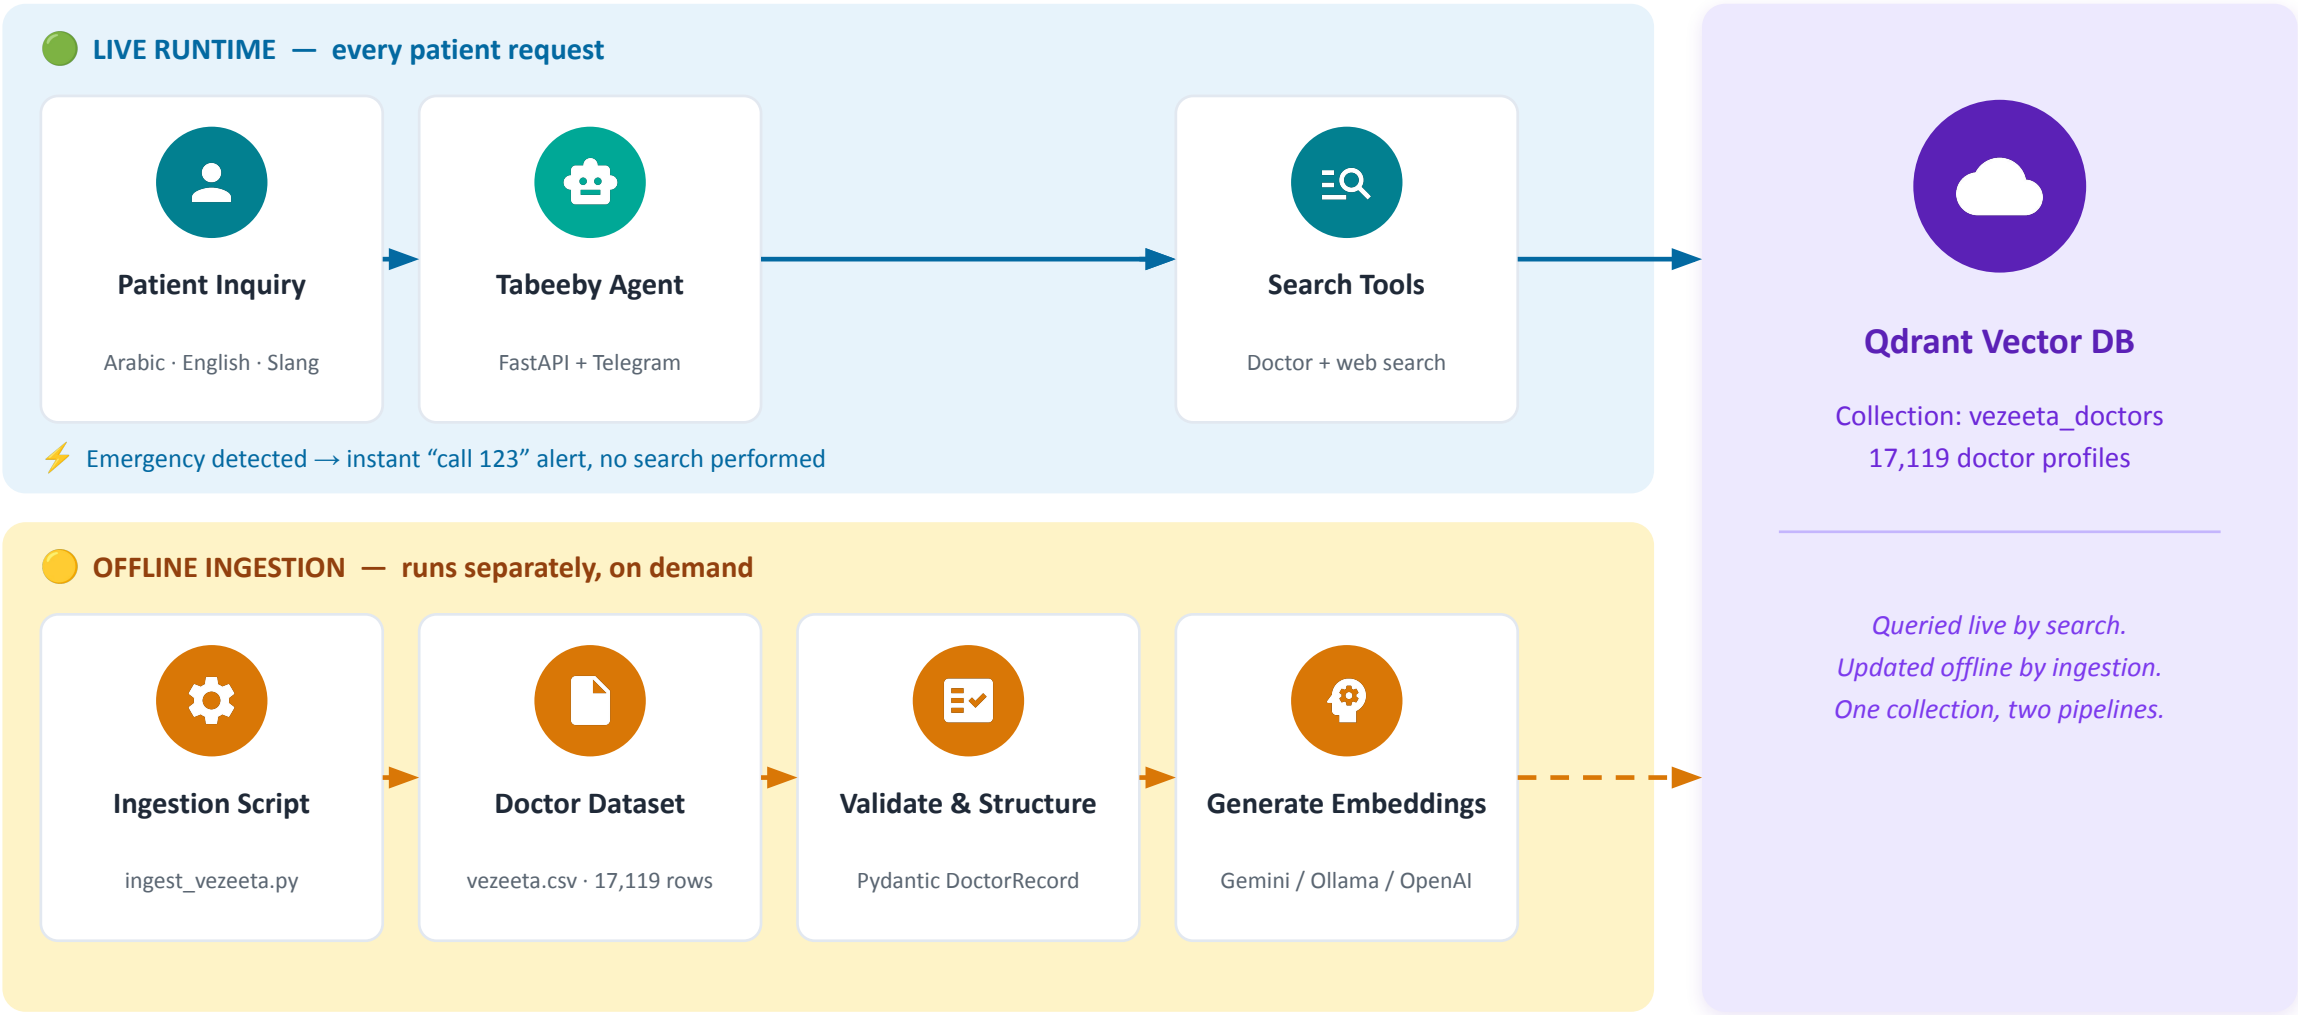

Narrows results by location and consultation fee automatically.

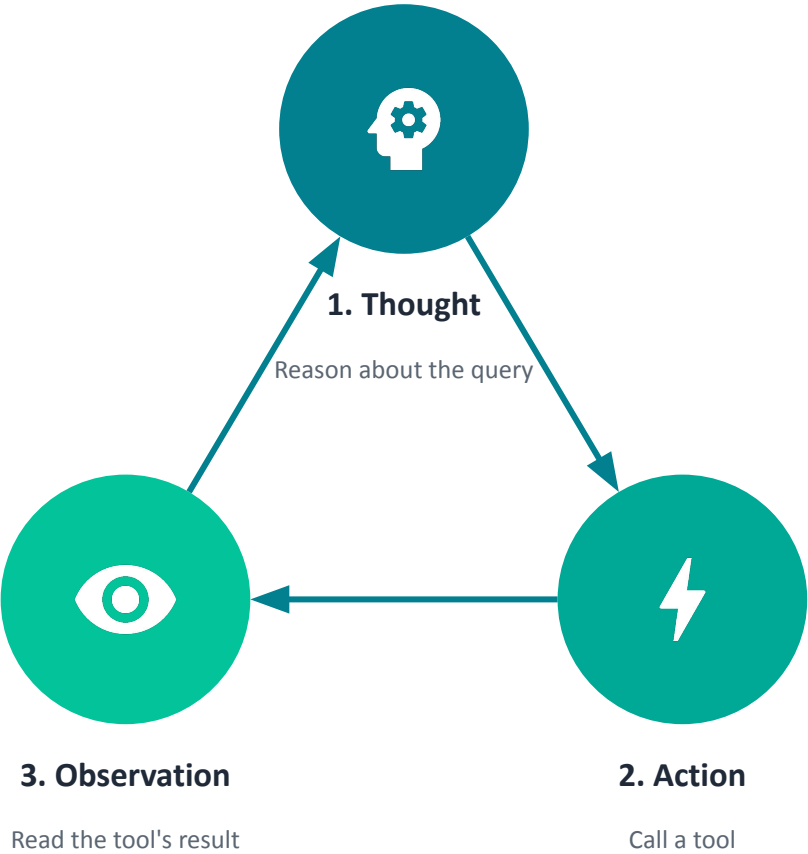

Delivers Booking-Ready Results

Ranked doctor cards with direct Vezeeta booking links.

Two Decoupled Subsystems, One Shared Index

How The Agent Thinks: A ReAct Loop

Repeats until the agent is confident enough to answer the patient.

Tools The Agent Can Call

search_doctors

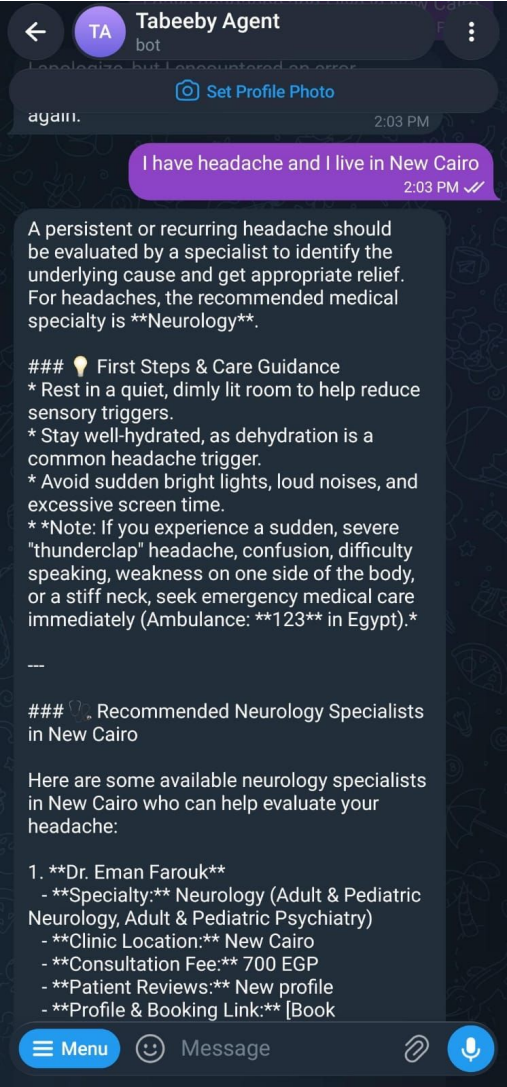

Semantic + filtered search over the 17,119-doctor Qdrant index

web_search (Tavily)

External medical knowledge and rare-condition lookups

Emergency Safety Net

Every message passes a guardrail first — acute symptoms like chest pain or stroke signs trigger an instant “call 123” alert instead of a doctor search.

Questions?

Thank you for your time.
